Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

	Application No.	Applicant(s)				
Office Action Comments	10/581,243	KITAMI, HIROKAZU				
Office Action Summary	Examiner	Art Unit				
	HARSHAD PATEL	2855				
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Application/Control Number: 10/581,243 Page 2

Art Unit: 2855

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

- 2. The abstract of the disclosure is objected to because it includes more than one paragraph. Correction is required. See MPEP § 608.01(b).
- 3. The disclosure is objected to because of the following informalities: The disclosure includes language that refers to the claims. It is improper to use claim numbers in the specification as the numbering often change during the prosecution of the application.

 Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Bose et al. (5,734,112) (hereinafter Bose).

Bose teaches a Coriolis flowmeter including all the features of the instant invention as claimed including at least one flow tube (12, 14) constructed of a bent tube of a symmetrical shape with

Art Unit: 2855

respect to a first axis (T, T') and supported at both ends by a support portion having inflow and outflow ports; a drive device (20) for alternately driving the flow tube in a rotating direction around a second axis (W, W') connecting positions supported by the support portion at the both ends; and a pair of vibration detecting sensors (16, 18) mounted at symmetrical positions to right and left of the drive device, for detecting a vibration having a phase difference that is proportional to Coriolis forces acting on the flow tube, the drive device is provided in the first axis, and a pair of second drive devices (21L, 21R) for alternately driving the flow tube in the rotating direction are further provided and are arranged at symmetrical positions to the right and left of the drive device; and the pair of second drive devices are driven in phase with each other, with the drive device and the pair of second drive devices being driven in a reverse phase with each other. The sensors are arranged between the drive device and the pair of second drive devices (Fig. 1). The sensors are equipped with a coil and magnet.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to HARSHAD PATEL whose telephone number is (571)272-2187. The examiner can normally be reached on Monday-Thursday (6:30 AM-5:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
